Components

DigiTrap System, Model DTS-1015RS
Rugged, 13 slot- card cage can be rack-mounted or can sit on a table with its rubber feet with the capacity to increase with you business model. Our start-up system accepts four DID trunks (in) from Telco and four analog lines out to the switching system. The DigiTrap collects the last 4 digits of each incoming call before transmitting the data to the computer. All connections are modular for an easy install.

Switching System, Model KSU616-4
Our switching system accepts the analog lines from DigiTrap and CO lines (POTS) for outdial or transfering calls.
Each switching system includes 4 operator telephones and is pre-programmed before we ship.

Software, Model PollStar and KisStar
Mastar, a third party vendor has been approved to provide the software interface to display Account Information, Message taking and and Call Managment.
